MATRIX

Tel Aviv

A space for movement. A complete design.

ARCHITECTURAL FITNESS

DESIGN PORTFOLIO

Planning, visualizations and equipment

Fitness as part of the architecture

Light, materials and movement in one space

From daylight into the depth of the space

A transparent facade, a timber ceiling and dark equipment create a coherent design language. Training zones connect around an open circulation route, with space for cardio, strength and floor exercise.

Cardio along the facade

The equipment faces the light and views outside.

Strength and free weights

Strength machines, benches and free weights sit deeper within the space.

Space for floor exercise

The mat and stretching area adds options for individual training.

2D plan

Equipment placement and the relationship between training areas

Entrance and seating | **Cardio by the glazing** | **Selectorized strength** | **Benches and free weights** | **Stretching and floor exercise**

The plan illustrates the equipment layout. Dimensions and operating clearances must be verified during detailed design.

08

The training facade

A consistent material language

Light tones, warm wood, dark stone and black detailing

Warm oak tones

Slatted timber ceiling

Dark stone tones

Columns and walls

Light porcelain

Mineral-toned flooring

Wave-pattern wall

A light graphic focal point

Matt black

Equipment and frames

Materials and colours are illustrative. Final products and samples require approval during design coordination.

The main training space

Strength islands and the glazed facade form a continuous sequence of training and movement.

Arrival, seating and exercise

The meeting point of the seating area, open training space and wave-pattern wall.

Stretching and floor exercise

The mat area sits beside the stairs and training stations.

Strength along the graphic wall

Dark strength equipment stands against the light wall and wave motif.

Cardio by the glazing

Cardio stations face the natural light and views outside.

The main training route

A sequence of strength equipment and circulation alongside the facade.

Free weights and an open facade

Benches, free weights and cardio meet along the glazed envelope.

The training facade

The transparent envelope reveals the training zones and equipment mix.

An equipment mix that works together

Cardio, strength, free weights and floor exercise

Training as a whole

The cardio area combines walking and running, Ascent Trainers, stair climbing and cycling. Strength stations and benches offer a range of movements alongside floor-exercise and stretching areas.

7
Treadmills

4
Ascent Trainers

2
Recumbent cycles

3
Adjustable benches

Models and quantities are scheduled for design coordination. Final order configurations and operating clearances require confirmation.

From design to detailed coordination

Connecting visualizations, specification and implementation

01

Dimensions and building envelope

Verify dimensions, heights, openings and column positions against the plans and a site survey.

02

Equipment and operating clearances

Confirm models, configurations, operating space and service clearances against manufacturer requirements.

03

Flooring and loads

Coordinate the floor substrate, loads and surface protection for the intended activities.

04

Power and connectivity

Coordinate power supplies, connection points and equipment and display infrastructure to suit the specification.

05

Lighting and ventilation

Coordinate lighting, ventilation and acoustics with the space and its intended use.

06

Finishes and details

Approve wall finishes, ceilings, the graphic wall, joinery and fixings with the project team.

This dossier illustrates the design and supports coordination. It does not replace construction drawings or a site survey.
